

Can Your Practice Afford NOT to Have the Diowave Laser System?

A Message From Our Medical Team

Joseph A. Costello, DC DABCO, Chief of Laser Medicine

Bruce R. Coren, DVM, MS, CEO, Founder of Class IV Laser Medicine

As part of the medical team for Technological Medical Advancements, we are proud and pleased to introduce our Class IV Diowave High Dose Laser Systems for neuro-musculoskeletal pain management and wound healing. Diowave lasers represent the next generation in advancing **private pay** for pain management thru a non-invasive drug and pain free platform¹.

High Dose Laser Therapy – HDLT now offers physicians and therapists a painless, non-surgical and side effect-free **treatment for conditions previously refractive to traditional medical care**. Maladies such as head, neck and back pain (acute or chronic) Carpal Tunnel Syndrome, arthritis, hard and soft tissue injuries, tendon and ligament strains, foot and heel pain, non-healing wounds, and even neuropathy to name a few – all respond well to HDLT. HDLT also accelerates wound healing and is an excellent adjunct to accelerating healing post surgically as it can significantly reduce recovery time over traditional therapies.

Results come from the laser's ability to "bio-stimulate" tissue growth and repair. This results in accelerated wound healing with a dramatic decrease in pain, inflammation and scar tissue formation. Unlike all other treatment modalities, laser therapy actually "heals" tissue and is a powerful **non-addictive** form of pain management. Diowave's superior results come from its ability to deliver healing laser energy to the target tissues at any depths. **Simply put – when it comes to traditional neuro-musculoskeletal medicine or wound care, HDLT is outperforming traditional therapy, safely and without side effects.**

Another great feature of HDLT is that a therapist or medical assistant can readily administer it. The physician's time spent in case management is minimal and the income is passive. Bottom line: we can show you how to achieve outcomes far superior to what conventional therapy has to offer your patients while simultaneously containing spiraling medical costs for marginal outcomes.

¹ The Diowave Laser System was cleared under FDA 510-k as an infrared lamp intended to emit energy in the infrared spectrum to provide topical heating for the purpose of elevating tissue temperature for temporary relief of minor muscle and joint pain, muscle spasm, pain and stiffness associated with minor arthritis, promoting relaxation of muscle tissue, and to temporarily increase local blood circulation.

Assuring Your Clinical and Financial Success

MISSION STATEMENT

Our Mission is to develop, manufacture, and market advanced medical products, including laser technologies, to improve the quality of life for the millions of people and animals who suffer from pain and injury. Quality, reliability and integrity are the primary focus of our Company.

COMMITTED TO YOUR SUCCESS

Each Diowave Class IV Laser System has been designed by experienced engineers and clinicians to provide years of reliable use. We back this up by a comprehensive three (3) year warranty, the best available.

In addition, we offer Telemedicine support, a Customer Service Program, a Patient Marketing Program and a Clinical Training Program that will support you regarding the safe and effective use of our laser system. Your success is our success.

FAQ

HOW MANY TREATMENTS ARE NEEDED AND IS THE THERAPY SAFE?

The DIOWAVE Laser Therapy™ produces expedient results. For most ACUTE conditions 6-8 treatments is all that is needed. CHRONIC conditions take longer and might require 10 or more sessions. While these are the averages, each person is unique and healing time varies by person and condition. For those with chronic degenerative pathologies maintenance therapy is recommended. Laser Therapy has been in use for over thirty years around the world. There have been almost no side effects reported. Occasionally some old injuries or pain syndromes may feel aggravated for a few days, as the healing response becomes more active after a laser treatment.

HOW LONG WILL THE TREATMENT TAKE AND WILL IT BE PAINFUL?

Depending on the condition, treatment times for this drug-free, non-invasive procedure will last on average 5-10 minutes but is based on the size of area, depth of penetration needed and condition being treated. Most patients notice a warm, often soothing feeling. There is no pain associated with a treatment.

WHAT ADVANTAGE DOES DIOWAVE – HIGH DOSE LASER THERAPY™ HAVE OVER OTHER FORMS OF TREATMENT INCLUDING LOWER POWER CLASS IV LASERS?

DIOWAVE High Dose Laser Therapy does not require the use of drugs or surgery, and there are no dangerous side effects or risks. In addition, DIOWAVE Laser Therapy significantly accelerates treatment outcomes when compared to traditional treatment modalities. This occurs due to its ability to stimulate tissue regeneration. When compared to other Class IV lasers, Diowave can deliver significantly greater dosages of healing energy to much greater depths. There is no pathology too deep-seated for the Diowave Laser to reach.

WILL PATIENTS PAY FOR DIOWAVE HIGH DOSE LASER THERAPY?

DIOWAVE laser users and its predecessor company have been in the private pay market for over 15 years. We previously ran a successful private pay laser clinic for over six years and it is where we developed our clinical training protocols and successful marketing strategies.

Testimonials

I am a Board Certified Family Practitioner doing the full spectrum of outpatient family medicine. Since purchasing the Diowave Laser we have used it on a large variety of clinical pathologies including OA of the shoulder, back, hip and knee as well as extremities, neck and back pain, post herpetic neuralgia and carpal tunnel to name a few. We have found it to be highly effective and well received by our patients.

JAMES E. CHLEBOWSKI, MD
Family Practice Center, PC

As a board certified physician in family and sports medicine we use the Diowave laser to help our athletes recover from injury at a significantly faster rate. Athletic injuries are healing almost 50% faster than with traditional therapy. We are very pleased with our 60-watt laser. We also find it just as helpful in our general patient population as it is clearly superior to the modalities currently available in our traditional physical therapy model.

MICHAEL KELLIS, DO, BRYAN KUCH, PT, MS.
Precision Orthopedic Specialties, Inc.

My quest for better patient care led me to add cold laser therapy to my practice in 2001, but I was disappointed with the poor clinical results. In 2004, I became the first class iv laser user in the US and I immediately found the clinical results I was seeking. Over the years, as the company developed more powerful lasers and I implemented them into my practice, I quickly saw better and faster outcomes – even for the most difficult and challenging conditions. Laser is now the majority income generator in my all cash practice.
