

## Areas Treated With DIOWAVE Laser Therapy

## DIOWAVE STEALTH INFRARED LASER THERAPY™ (DSILT)

### Feel the Difference

In sharp contrast to "Cold Lasers" (LLLT or Low Level Light Therapy) which provides no feeling or sensation, or Class IV or Other high-power lasers which can get too hot, patients now get results of high-power lasers with a more even sensation of heating. It works to provide infrared laser energy into the body to reach damaged cells and tissues. Results are typically faster than many other therapeutic modalities. Most patients notice a warm, tingling and stimulating sensation of heating. Signs of improvement are often reported after a few treatments.

### See the Results

Both acute and chronic injuries respond well to the DSILT treatment. Inflammation and swelling are quickly reduced to allow a greater range of motion to the affected area. This helps to regain activity and mobility. With each treatment applications, injured tissues become more functional.

# See What Patients Are Saying

**Jack K:** I was experiencing severe pain on the outside of my right knee. I had a partial knee replacement over 8 years ago and thought I was headed for a total knee replacement. DIOWAVE Laser Therapy was recommended to me and after one treatment the pain was gone. I slept the entire night for the first time in over 2 weeks without waking up with pain.

**Michael R:** I am a diabetic who has been suffering from progressive peripheral neuropathy (numbness) despite trying all of the medications offered by my various treating physicians. After 3 treatments of DIOWAVE Laser Therapy I started to notice a tingling sensation in my feet and within 6 treatments I had 50% of my sensation back and no longer needed to walk with a cane.

*Disclaimer- Individual Patient Results May Vary*

**Roberta M:** I injured my shoulder in a horse related accident over 18 years ago. It has been painful ever since and my range of motion has been decreasing yearly. After the first DIOWAVE Laser Therapy treatment, I had significant relief of pain and was able to lift my arm over my head with little to no pain.

**Jim Palmer (Hall of Fame Baseball Pitcher):** After a baseball career of over 20 years and being very athletic during the off season and even after retirement, the hands of time begin to catch up to me. Wrist pain, knee pain and even back pain where just a few of my many aches and pains I had been experiencing. DIOWAVE Laser Therapy is just what I needed. It has helped relieve my pain and allowed me to remain active.

## Frequently Asked Questions about DIOWAVE Stealth Infrared Laser Therapy™ (DSILT)

### How are treatments administered?

Treatments are performed by positioning the laser hand-piece approximately ½" directly above the skin and surrounding the area of injury and pain with the laser treatment beam.

### How many treatments are needed?

For most ACUTE conditions 5 – 6 treatments are all that may be needed. CHRONIC conditions take longer and might require 6 – 12 treatments. While these are the averages, each person is unique and recovery time varies by person and condition. For those with degenerative conditions your doctor may recommend 1 or 2 follow-up treatments each month.

### Is DIOWAVE Laser Therapy safe?

Low Level Laser Therapy (LLLT) has been in use for over Forty years around the world. There have been almost no side effects reported. Occasionally some old injuries or pain syndromes may feel aggravated for a few days, as the bodies response may become more active after a laser treatment

### How long will the treatment take?

Depending on the condition, treatment times for this drug free, non-invasive procedure will last on average 10-15 minutes and is based on the location of your pain.

### Will the treatment hurt?

The patient will notice a warm, often soothing feeling. There is no pain associated with a treatment. Many patients quickly experience pain relief, reduced muscle tension and tightness, reduced inflammation and improved range of motion.

### When can normal activity begin again?

The moment a patient leaves the clinic, they may resume normal daily activity. It is important for patients to remember to not overexert themselves for a few days, as the body is still in the recovery phase.

### Will insurance cover treatments?

DSILT may not be covered by insurance plans. If insurance does not cover the cost of treatments, there are affordable payment plans available.

### How does DSILT work?

When the photons of infrared laser light penetrate the skin and underlying tissue, they are absorbed by the cells, and converted into energy. This temporarily increases blood flow, reduces muscle spasms and ultimately pain. Frequent treatments are required to get the best outcomes. For more chronic conditions your care provider may suggest maintenance therapy.

### What advantage does DSILT have over other forms of treatment?

DSILT does not require the use of drugs or surgery, and there are no dangerous side effects or risks. In addition, DSILT may provide enhanced treatment outcomes typically faster than most other treatment modalities

### How is DSILT better than other forms of laser therapy treatments?

DSILT is the most advanced form of laser therapy in the world and it can only be found at a Diowave Treatment Center.
